STRENGTHS

PROFESSIONAL SUMMARY

Motivated and detail-oriented Software Engineer and Systems Developer with an Advanced Diploma in Software Engineering (ADSE) under the Aptech Certified Computer Professional (ACCP) programme. Experienced in designing, developing and maintaining full-stack web applications, REST APIs, database-driven systems and IoT monitoring solutions. Proven track record delivering end-to-end software projects for international clients on Fiverr and Upwork. Strong interest in IoT, AI and emerging technologies. Currently planning to pursue a BSc in Data Science.

EXPERIENCE & PROJECTS

Java Web Applications

Academic & Personal Projects

2022

- Developed web applications using Java, JSP, Servlets, JDBC and MySQL.
- Implemented user authentication, role-based access and CRUD operations.
- Deployed and tested applications using Tomcat server.
- Designed relational databases and optimised SQL queries.

IT Systems Support

Election & Boundaries Commission of Eswatini (EBC)

2023

- Assisted in the development, testing and deployment of an IT system for internal operations.
- Supported database setup, system configuration and maintenance.
- Participated in user testing, data validation and troubleshooting.
- Worked with cross-functional teams to ensure system reliability and performance.

Python Flask RESTful Applications

Academic & Personal Projects

2024

- Built RESTful APIs and web applications using Python Flask with SQLite integration.
- Applied API testing using Postman and implemented data validation pipelines.

Freelance Software Developer

Self-Employed · Fiverr & Upwork (Remote)

2024 – 2025

- Worked as a freelance software developer delivering web and mobile solutions for clients on platforms such as Fiverr and Upwork.
- Built and maintained frontend applications with a focus on usability, performance and clean code.
- Collaborated directly with clients to gather requirements, translate ideas into technical solutions and deliver projects end-to-end.

IoT-Based Monitoring System

Academic Project

2025

- Designed and simulated an IoT system for monitoring and data collection using sensors.
- Implemented communication between devices and a real-time web dashboard.
- Focused on data acquisition, real-time monitoring and automation concepts.

Automated Trading System

Personal Project

2026

- Developed an automated trading system that processes market data and executes trades.
- Implemented real-time data handling, strategy logic and risk management features.
- Applied API integration and automation to support decision-making.

Eswatini Market — Full Stack Marketplace Platform

Personal Project (Flagship)

2026

React TypeScript Vite Node.js JavaScript Responsive Web Design

- Independently designed and developed a digital marketplace connecting buyers and sellers across Eswatini, supporting local businesses and digital commerce.
- Implemented user authentication, product listing management, search functionality, and category-based browsing.
- Built fully responsive web interfaces for desktop and mobile users
